

Tandem Seal

Our tandem seal increases on line reliability and is considered the safest environmental design. If a primary seal failure occurs on a critical piece of equipment, the outboard seal can take over and function until maintenance of the equipment can be scheduled.

Tandem seal systems which may include our SO-1 buffer / barrier fluid reservoir system. This system is recommended when products such as vinyl chloride, carbon monoxide, light hydro carbons, and a wide range of other volatile, toxic, carcinogenic, or hazardous fluids, are being processed.

Tandem Cartridge
